

Project Documentation

Task: Create a Frontend Project using REACT where a user need to fill a form and on Submit the form data of every submitted form is shown on the another page.

Project Title: Book Details

Technologies Used : HTML, CSS, JS, REACT.

Github Link : https://github.com/tanya-03/ST_4.git

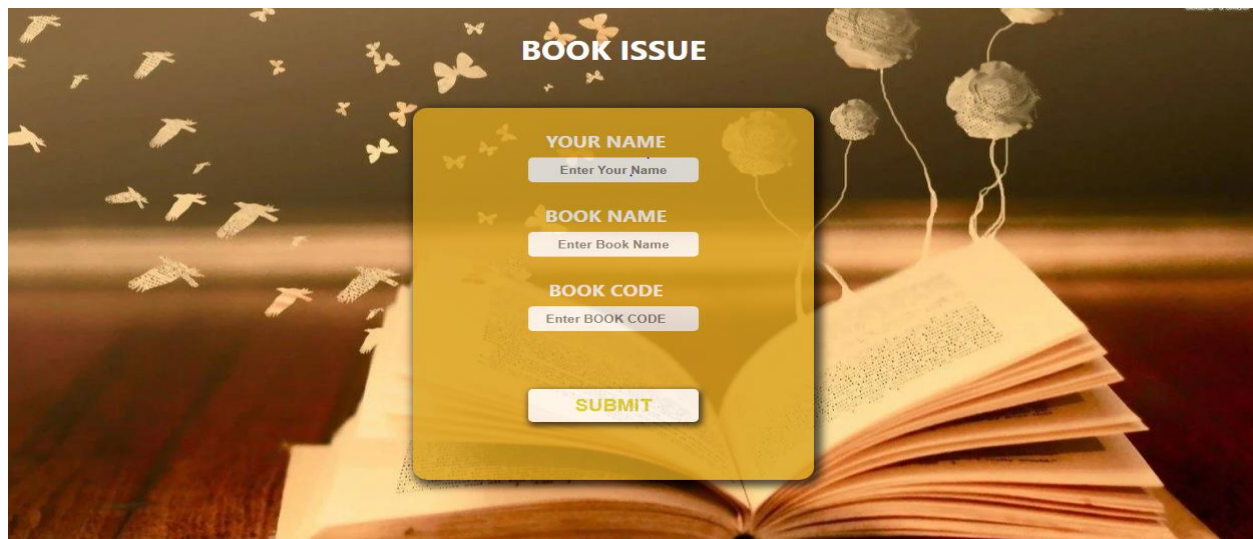

Project Description:

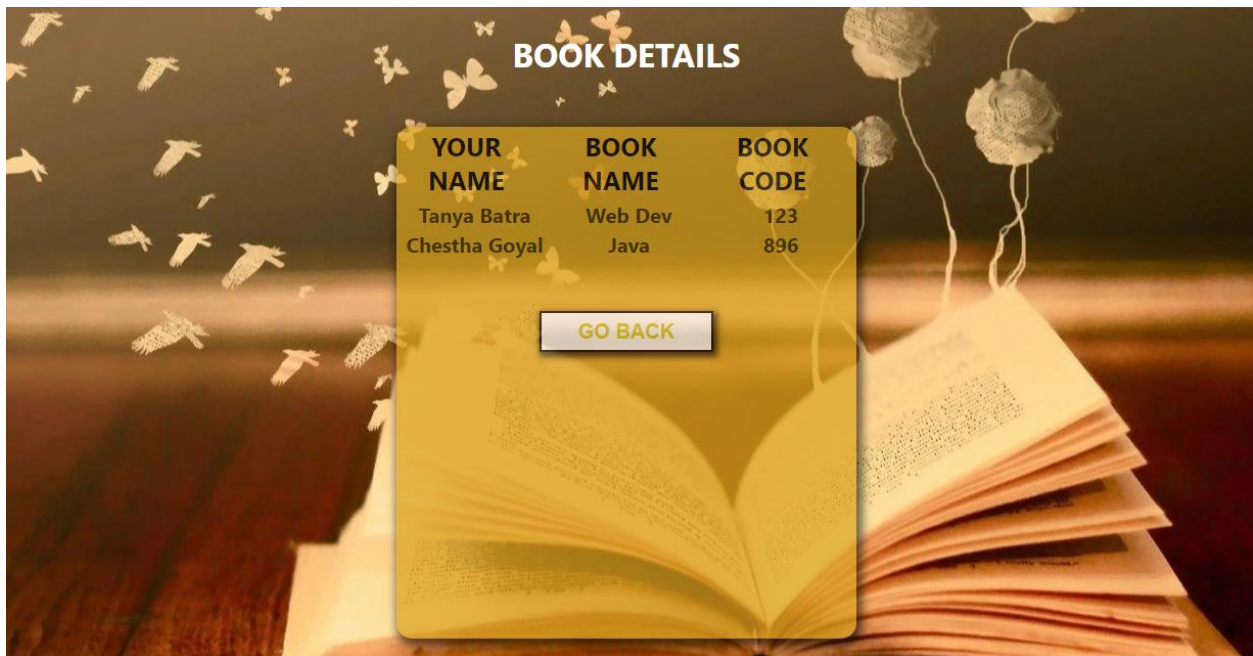

This project is a form type react project made for the taking the entries of Book details and storing and displaying in a tabular form.

How to Install and Run the Project:

This is a React application and hence needs to be forked and cloned in your system and then Run it with the code **npm start** in the console with pre- requisite of nodejs installed in your system and the directory should be the one in which **package.json** file is present.

First Page

Conclusion & Scope of Improvement:

This react app is just a part of a Book website which only serves the purpose of taking the Booking details. Soon it will be combined and its purpose will be fulfilled.
